Test Document for OpenAI Analysis

This is a test PDF document created for testing the OpenAI file reader.

Key Features:
- PDF text extraction
- AI-powered analysis
- Question answering

The OpenAI API can now read and analyze PDF files through the Streamlit interface. Users can upload PDF documents and ask specific questions about their content.

This demonstrates the capability to process various document formats including:
- PDF files
- Word documents (.docx)
- Text files (.txt)
- Code files (.py, .js, .html, etc.)

The system extracts text from these documents and uses OpenAI's GPT models to provide intelligent analysis and answer user questions.
